

GATEMATE®

Williamsburg Gravity Gate Closer

- Counterbalance weight for use on inside of gate for purpose of ensuring that a gate closes.
- For gates up to 4' wide
- Do not install where a road or path would be obstructed
- May be used on swimming pool gates if it meets local required standards
- Parts included: solid steel ball, chain with black powder coating, link to attach ball to chain, 2 galvanized staples for fastening ends of chain.

Instructions for Installation

Position a 'gate closer' post in the ground as follows:

- Perpendicular to fence line
- 18 - 20 inches away from hinge post
- Even with the hinge post
- Protruding approximately 26 inches out of the ground

Fasten one end of the chain approx 1/3 to 1/2 the width of the gate from the latch side of the gate and around 3 feet up from the bottom of the gate.

With the gate opened in the 90 degree position, extend the free end of the chain to the 'gate closer post' and attach so the chain is just about taut.

While the gate is open, using the mending link, fasten the ball to the chain (position the ball just behind, yet free of the gate post). The gate should now close easily and the ball should just barely clear the ground. If the ball touches the ground, attach the chain higher on the gate. Excess chain may be trimmed if desired.

It is recommended that a wood stop be installed on the latch post as a back up support even when a latch is used.

Directions are for guidance only. Requirements may vary due to individual circumstances. For free technical assistance, you may call 1-866-982-2239. Gatemate is a broad line of sturdy and attractive hardware for wood gates. Ask the dealer for more information on Gatemate products.
